

FP2 - TIP 'O THE WEEK #33 SENDING OMF/BC TRANSMISSION FILES REPORTS - RESETTING EXPORT PATH

Resetting the Export Path for OFM/BC Transmission Reports.

Some of you have received an error message "Unable to open file" when trying to create your OMF or BC Transmission Report (Reports → Management Reports → Create OMF/BC Transmission Files).

This happens when the path to your data file has somehow been changed and is now not a valid path.

To correct this, go to Set Up → System Information

The path that the files will be sent is in the field Export Path at the bottom of the window. You can type any valid path into this location.

If you want the files to go to the same folder as your datafile sits, you can click the Reset button at the bottom left of the screen. This will put that path into the Export Path field. If instead you want the files to go to another folder please enter the path manually.

Now you should be able to run your report with no trouble!

Quote of the week:

"I can't believe that having said what I said was interpreted as having been what I said when I said it, because I said it where I said it, when I said it, and who I said it to." *Don King*
