

FP2 - TIP 'O THE WEEK # 101 WINDOWS VISTA

Vista

So, your department is getting a new computer? The good news is that FirePro 2 is compatible with the new Vista operating system.

The bad news is that it looks like there is a bug in Vista with file sharing. Vista is kind of selfish in that it does not like to share (someone should send Vista to kindergarten to learn that skill!) This is not a problem specific to Omnis (the system behind the FirePro program) but will definitely affect it.

Essentially, if your data file is on a Vista machine, and another Vista machine tries to access the data file while that or another Vista machine has the same data file open, the second computer trying to access it will lock up – and that's not a good thing!

If possible it's best to keep the data file on a "Non-Vista" machine. If that's not possible, call us for more help.

Have a wonderful week!

Quote of the week:

"Life is like a roller coaster -- live it, be happy, enjoy life."
Avril Lavigne

Chuckle of the week:
